# Your Cirilium Portfolios Quarterly Report

First quarter 2024

# What your report covers

- ▶ Our market summary
- ▶ Your investment summary
- ▶ Your portfolio holdings
- ▶ Your performance review
- ▶ Portfolio changes
- ▶ Investment outlook
- ▶ Important information

In order to aid your understanding, definitions of the underlined terms are provided in the investment glossary at the end of this document.

Marcus Brookes  
Chief Investment Officer

# Our market summary

Strong company earnings, improving economic data and broadly easing inflation, saw global equities leap 9.3%. Developed markets notably outperformed emerging markets with AI-related stocks continuing to generate great interest, especially in the US. Even so, Japan was the top-performing regional equity market. Against a backdrop of robust economic gains and changing expectations as to the timing of interest-rate cuts, government bonds declined while corporate bonds were mostly flat.

## Equity markets

Despite downward revisions to the expected pace of US interest-rate cuts, US equities surged 11.4% over the quarter on the back of robust corporate earnings and resilient economic numbers. The Magnificent Seven were especially prominent. The best returns came from the communication services, energy, technology, and financials sectors. Meanwhile, more interest-rate sensitive sectors, such as real estate and utilities, struggled.

European equities trailed those in the US and Japan but still delivered a 7% gain. As in the US, tech stocks led the field thanks to the ongoing exuberance for all things AI. Stocks in the financials, consumer discretionary and industrials sectors also prospered against a backdrop of steadily improving economic data and declining inflation, which boosted cyclical stocks. Stocks in the utilities, consumer staples and real-estate sectors trailed.

The UK equity market trailed once more. It returned 3.7%, partly due to its high weighting to value stocks during an ongoing rally in growth stocks. The mood was further spoiled by data showing the UK economy fell into a technical recession in the second half of 2023 as consumer spending struggled in the face of higher inflation and interest rates. Cyclical stocks, such as financial, industrial and energy companies, generally outperformed.

Emerging markets gained 3.4%. Despite leaping 9% in February, Chinese equities finished the quarter down 1.3%. Peru was the top performer. Like Columbia, it benefited from interest-rate cuts. Conversely, Turkey performed well after recent rate hikes, which were welcomed by investors as a return to conventional monetary policy. Taiwan and India also outperformed. While Korea, South Africa and Brazil all trailed, Egypt was the worst performer.

## Fixed-income

UK gilts trailed other government bonds. They declined 1.9% in the face of elevated UK service inflation and wage growth, and the Bank of England reiterating that UK rates would need to remain restrictive until inflation returned to target. US Treasuries fell 1%. The US Federal Reserve (Fed) kept rates on hold but, by the end of the quarter, markets were pricing-in just three US rate cuts in 2024, down from a forecast six rate cuts at the start of January.

Source: Quilter Investors as at 31 March 2024. Total return, percentage growth in pounds sterling except where shown, rounded to one decimal place. The performance shown for global equity markets is represented by the MSCI AC World Index; developed markets by the MSCI World Index; US equities by the MSCI USA Index; European equities by the MSCI Europe ex UK Index; UK equities by the MSCI United Kingdom All Cap Index; UK smaller companies by the MSCI United Kingdom Small Cap Index; emerging markets by the MSCI EM (Emerging Markets) Index; Chinese equities by the MSCI China Index, US Treasuries by the ICE BofA US Treasury (GBP Hedged) Index; UK gilts by the ICE BofA UK Gilt Index; and sterling corporate bonds by the ICE BofA Sterling Corporate Index.

# Your performance review

**Ian Jensen-Humphreys**  
Portfolio Manager

**Sacha Chorley**  
Portfolio Manager

**CJ Cowan**  
Portfolio Manager

The Cirilium Portfolios delivered returns of between 0.9% for the Cirilium Conservative Portfolio and 5.4% for the Cirilium Adventurous Portfolio. Thanks to the strength of equity markets during the period, the higher-risk Cirilium portfolios outperformed in line with their higher respective allocations to stock markets. The higher-risk Cirilium portfolios also outperformed their respective Investment Association (IA) comparators thanks to their equity exposures in Japan, the US and Europe. However, the lower-risk profiles struggled due to their higher bond weightings with several of our active managers losing ground after positioning their portfolios for lower bond yields (rising bond prices) when, in fact, the reverse happened.

## How our equity holdings performed

### Japanese holdings lead the way

Japan was the top-performing equity market with the MSCI Japan Index returning 12.2% in the period. Our holdings in funds such as Baillie Gifford Japanese Income Growth and M&G Japan were the key beneficiaries here. Our manager selection was also positive with the M&G fund benefiting from stronger performance thanks to its more value-oriented investment style, which prospered during the quarter.

### Market breadth increases in US

After the narrow market performance of 2023, which saw US indices lifted ever higher by the Magnificent Seven, 2024 started with a broader set of stocks driving performance in the US. Growth stocks continued to be the flavour of the day, driving strong returns from Pershing Square. Even so, value holdings such as Brandes US Value and Berkshire Hathaway were also among the top performers in the equity portfolios.

### China continues to trail

The weakest performers among our equity holdings were in China. The Fidelity China Consumer Fund declined 4.8% to underperform broader Chinese equities by 3.5%. Slow economic growth, a lacklustre policy response and poor corporate earnings delivery have all contributed to the underperformance of the Chinese market, which was down more than 1%, while developed equity markets leapt 10% over the quarter.

## How our fixed-income holdings performed

### Yields up, prices down

Our fixed-income holdings delivered a small loss as bond yields rose, meaning their prices fell. Government bonds were most impacted but corporate and high-yield bonds eked out small gains. The portfolios held an overweight exposure to high-yield credit via funds like Premier Miton Strategic Monthly Income and the Blackstone Loan Financing investment trust, which helped offset losses elsewhere in the fixed-income portfolios. Among the most notable underperformers was the Allianz Strategic Bond Fund. It was positioned for meaningfully lower bond yields at a time when bond yields rose, meaning their prices fell.

## How our alternative holdings performed

### Positive contribution from diversifiers

The alternatives allocation added to returns over the quarter, with a number of different strategies performing well. Within the convexity strategy sleeve of the portfolios, we saw strong returns from the AQR Managed Futures Fund. Within the alpha strategy sleeve there were gains for our long/short equity hedge funds and our absolute return fixed-income managers. Our new carry strategy holding, the Schroder Alternative Securitised Income Fund, also delivered gains. Our inflation-linked holdings were more mixed. While rising commodity prices helped the L&G Multi Strategy Enhanced Commodity Fund, rising bond yields caused holdings such as Pantheon Infrastructure to struggle.

# Portfolio changes

In February, we decreased our high-yield bond exposure and reallocated back into global equities. With valuations for high-yield bonds now looking stretched, we see relatively little potential upside remaining in the asset class compared to the risk of potential losses should the economic backdrop deteriorate.

## Schroders

### New holdings

#### Schroder Alternative Securitised Income Fund

The fund invests in securitised credit, a part of the fixed-income market with low interest-rate sensitivity. It diversifies through exposure to consumer borrowing, rather than to traditional corporate borrowing, that's backed by tangible assets. The fund is managed by some of the most experienced people in this part of the fixed-income market and complements the other holdings in the carry strategy sleeve of our alternatives holdings.

### Removed holdings

#### Sandbar Global Equity Market Neutral Fund

Following the fund research team's review of this holding, we removed it from the Cirilium Portfolios due to lower conviction in the manager and the future return prospects for the strategy.

#### River European Change for Better Fund

This position was removed to help consolidate our European manager roster into our preferred holdings.

#### Wellington Emerging Market Local Currency Debt Advanced Beta Fund

We took advantage of a recent run of strong performance for the fund to sell-out of the strategy as it no longer aligns with our preferred tactical positioning for our fixed-income holdings.

# Investment outlook

Although we believe the global economy remains on course for a soft landing, the economic divergence between regions is becoming ever more apparent. US economic growth remains strong, whereas Europe and the UK have struggled with anaemic growth for over a year. The US is seeing a potential reacceleration in inflation that's less apparent in European and UK data (although much of this difference is down to peculiarities in housing cost measures rather than real world differences). Even so, this presents the prospect of a divergence in monetary policy. While the European Central Bank (ECB) is clearly signalling a June interest-rate cut, it's looking increasingly likely that the Fed will need to wait a little longer. In the meantime, the solid economic growth in the US should provide a significant tailwind for its equity market.

## 1. Real incomes improving

Over the past year or so, inflation has fallen faster than wage growth, which is improving real incomes ie income after inflation. This is gradually restoring household purchasing power and helping to insulate economies from more material economic slowdowns. But stronger demand fuels inflation, which means expectations for interest-rate cuts have been dialled back. This makes the outlook for bonds more difficult to forecast and we retain a neutral weighting here.

## 2. A positive backdrop for risk

We think the path of least resistance in the coming months is for equity markets to continue moving higher. Corporate earnings have remained solid and while interest-rate cuts would be an additional positive, the reason we have yet to see them is the more robust than expected growth in the US economy, which should be good for equity markets. This leads us to running a modest equity overweight in the portfolios.

## 3. What if we're wrong?

The biggest risk to a soft landing is that it develops into a hard landing. This would hurt equity markets, but provided we avoid stagflation, where ailing growth is accompanied by elevated inflation, bonds should perform well. However, recent economic data has raised the prospect of a re-acceleration in growth and inflation. While we think a continuation of this is unlikely, due to the delayed effects of the interest-rate rises, it's a risk that we remain aware of nonetheless.

# Glossary

## Alpha-strategies

Alpha strategies target returns above an index or benchmark. They should deliver positive returns regardless of market direction, but they require markets to be moving.

## Carry-strategies

Carry trades try to exploit differences in future pricing points, interest rates, or currencies. Carry strategies seek regular, low-risk returns regardless of market direction.

## Convexity-strategies

Convexity strategies are investment strategies that create positions where the payoff is greater than the potential loss, or that available from its benchmark. They can outperform in rising and falling markets but tend to lag when markets are flat.

## Corporate-bonds

Corporate bonds are bonds issued by companies. They are generally riskier than government bonds, so corporate bonds normally offer higher interest rates (or yields) to compensate for the additional risk.

## Credit

Credit is the generic term for bonds that are issued by companies (corporate bonds), not governments or government-backed institutions.

## Cyclical-companies

Cyclical companies are those whose fortunes are closely linked to the economic cycle. This means their revenues generally rise during periods of economic growth and fall during recession.

## Emerging-markets

Emerging markets are developing economies that are in the process of transitioning into becoming developed markets by evolving their industries, infrastructure, and political and legal systems.

## Gilts

Gilts is the name given to bonds issued by the UK government.

## Government-bonds

Government bonds, also known as sovereign bonds, are bonds issued by governments.

## Growth-stocks

Growth stocks tend to be younger companies that derive their value from the rate at which they're expected to grow their future earnings. Generally, they pay limited dividends as they reinvest their profits to grow their businesses.

## Hard-landing

A hard landing is when a central bank, such as the Bank of England, raises interest rates to slow an economy resulting in a recession. Raising rates without causing a recession is called a soft landing.

## High-yield-bonds

High-yield bonds are bonds issued by countries, companies, or institutions with lower creditworthiness who must pay greater rates of interest to compensate their bondholders for the increased risk.

## Inflation-linked-strategies

Inflation-linked strategies aim to deliver returns that rise in line with inflation. Such strategies include commodities-based approaches as well as real assets such as infrastructure or property strategies.

## Magnificent-seven

Magnificent Seven is a term used to describe Amazon, Apple, Alphabet, Meta, Microsoft, Nvidia and Tesla. They are also referred to as mega-caps.

## Monetary-policy

Monetary policy refers to the tools and actions, such as interest rate changes, that a central bank can take to influence borrowing costs and money supply in its economy.

## Overweight

Overweight is when a fund or portfolio holds a larger position in a particular stock, sector, region, or strategy than the index or model against which it's benchmarked. Underweight means the opposite.

## Soft-landing

A soft landing is when a central bank, such as the Bank of England, can successfully slow down inflation, by raising interest rates, without causing a recession. When a central bank raises rates too quickly or by too much, it can cause a recession. This is known as a hard landing.

## Treasuries

Treasuries are US government bonds. They are issued by the US Treasury.

## Value-stocks

Value stocks tend to be well-established, mature businesses. They are companies whose share price is low relative to their value. Consequently, value stocks are among those with the highest dividend yields.
